

Apple iPhone

If you have an Apple iPhone or iPad there is an app called "PWS Weather" you can install which will then allow you to see all the data from the sparks weather station real time. You will need to install the app and then add the sparks station ID. Our station ID is: KFLSTPET280 (delete old station KFLSTPET69 if you already have it)
Following are three screenshots to help you.

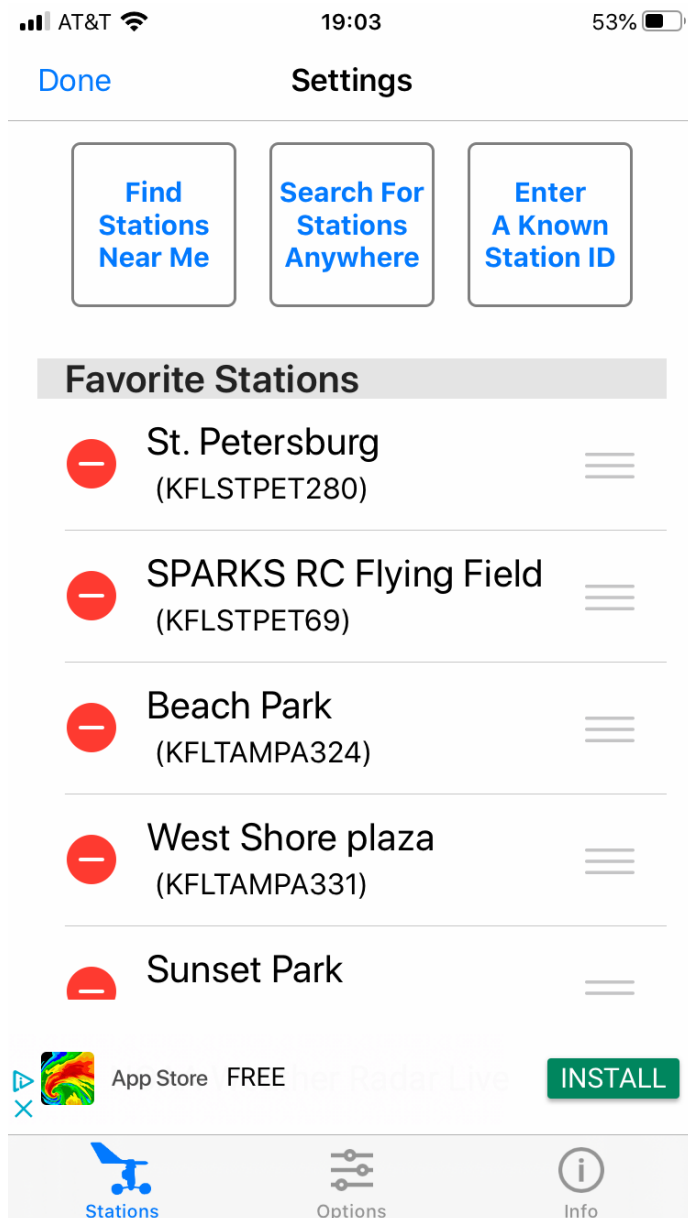

Search for the app using the words PWS and monitor

Enter a known station (touch the setting button to get to that screen)

Then you should see the last screen with the station ID

Make sure you scroll down to see the graphs too on the app!

St. Petersburg

KFLSTPET280
